Welcome to the world of streaming music

Not just another speaker

SoundTouch™ is an entirely new way to stream music wirelessly—easier than ever before. SoundTouch™ systems connect directly to Internet stations and streaming music sources like Deezer, Pandora, iHeartRadio, putting them right at your fingertips. Wi-Fi streaming is the new listening standard. We've made it easier and more rewarding to enjoy.

Music is one touch away

When it comes to music, you know what you like. That's why we designed SoundTouch™ Wi-Fi music systems differently than others. They feature six presets that you can easily set (and change) directly on the system or with the free SoundTouch™ app. Instantly, your favorite music plays at the touch of a button, like on your car radio. It's an approach that makes streaming music as easy as turning on a light—only much more fun.

Instant access to your stream music >

Powerful SoundTouch™ app

The [SoundTouch™ app](#) ([http://populartech.com/tech_details/overlay_soundtouch_app](#)) makes it easy to explore new music you have. Use it to set up the system on your smartphone, tablet or computer. You can drag and drop any music source—album on Spotify, an iTunes® playlist, radio station—to your six presets. No touch away. But when you want to change your presets, use the app to find music in the online musical universe or files in your music library. You can also use the app to control multiple systems in different rooms.

Built for multi-room audio

If you truly love music, you want it to flow through your home. That's why there's a SoundTouch™ system for every room—from small and portable speakers to outdoor systems and home theater. Start with any one SoundTouch™ system, and keep adding them whenever you'd like. These systems work together to create a multi-room listening experience, so you can play the same music everywhere or listen to different music in different rooms—even on the patio.

Stream music around the home >

Stay connected
